Paul Parisot

Software Engineer - System Programming

Github: paulogarithm
paul.parisot@epitech.eu

About

Systems-focused software engineer with strong foundations in C/C++, Go, and low level languages.
Experienced in building programming languages, game engines, and distributed systems.
Open-source contributor with 10k+ LoC on critical packages.
Currently deepening theoretical CS foundations (graph theory, complexity theory, automata) through preparation for the French *agrégation d'informatique*, a highly selective national CS competitive exam.

Skills

Technical: C/C++, Golang, Python, Flutter, JavaScript/TypeScript, Haskell, Lua(u), OCaml, Assembly
Other: Git Toolchain, Devops (Docker, Kubernetes, ...), CI/CD, Linux Environment

Professional Experience

Gno.land - Junior Software Engineer (Open-Sourced)

- Developed 6+ core packages in Gnolang (Go variant), including printf, EVM compatibility, and a petition system.
- Found and fixed **6 critical bugs** causing runtime crashes; **10k lines of code** contributed.
- Wrote extensive tests under strict CI/CD and code review policies.

Faurecia / Forvia - Software Demo Engineer

- Built a **Unity-based demo app** showcased at **CES 2024**, simulating real-time GPS and UI navigation.
- Designed interactive tools like a **GPS path engine** and POI search interface.
- Delivered production-ready features **ahead of schedule**, praised for speed and code quality.

Epitech / IONIS - Technical Assistant & Instructor

- Taught **400+ students** in C, C++, asm, and Haskell; reviewed and graded assignments.
- Created **interactive learning content** (quizzes, flipped classes, tutorials).
- Applied **pedagogical methods** (Constructivism, Cognitivism...) to boost student engagement.
- Contributed to a historically high **success rate** in ASTEK-coached cohorts.

Personal Projects

blorox – Modular 3D game engine inspired by Roblox (link)

Designed a game engine in C++ with runtime-loaded rendering and logic modules.
Embedded Lua scripting & mimicked Roblox's API for compatibility.
In active development, pending finalization until C++26 reflection features are available.

Skills: C, C++, Lua, ECS Architecture, Plugin Systems, Runtime Linking, Engine Design

cclass – Runtime Memory Mutation Engine (link)

Designed a pure C framework that dynamically modifies compiled assembly instructions inside raw memory pages.
Utilized `mmap` system calls with precise protection flags to bypass traditional virtual table dispatch overheads.
Enforced strict memory alignment rules to maintain absolute stability across underlying hardware execution targets.

Skills: C, Linux Systems, x86 Assembly, mmap, Memory Safety, Low-level Debugging

Sledge – Cross-Cloud Data Migration, Synchronization & Orchestration Engine

Developed and completed a generic cross-cloud migration tool handling complex data structures and database interactions.
Architected and shipped a complete backend platform in Go optimized for high-volume data stream operations, via a custom cloud abstraction layer (`provicol`) supporting AWS S3 and GCP.
Utilized the Docker API at runtime to dynamically spin up, isolate, and orchestrate concurrent environment containers.
Applied strong relational algebra principles to optimize **SQL queries** and manage cross-platform data integrity.

Skills: Go, SQL, Docker API, Python, Data Integrity, Cloud Computing, System Automation

ZZZcript – Statically-typed FP language (link)

Built a **lexer, parser, AST interpreter** from scratch.
Wrote recursive eval engine in **Go**, inspired by Haskell and Golang.

Skills: Go, Haskell, Parsing Theory, AST Design, Functional Semantics, Interpreter Architecture

Education

Epitech, Paris 2022 – 2027
Master's Degree in Information Technology (Master's level diploma)
Level-7 Certification - Expert in Software Engineering

McGill University, Montréal 2025 – 2026
Certificate in Management
Coursework Accounting, Business Administration, Organizational Management
